DETAILED ACTION

Allowable Subject Matter

1. Claims 2, 3, 5, 9 and 16-25 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 4 rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al. (6,674,093) in view of Orita et al. (6,344,375).

Regarding Claim 4, Tanaka et al. disclose an active matrix substrate and manufacture therefor where in Fig. 6 it is disclosed an active matrix type display device using a thin film transistor as a switching element in the displaying portion or driving portion where the thin film transistor comprises an insulating substrate 101 on which a gate electrode 102, a gate insulating film 103, a semiconductor layer 104, a drain electrode and source electrode 106 and a passivation film 107 are successively laminated. Tanaka et al. fail to disclose the required void dimensions for the amorphous silicon semiconductor layer. However, Orita et al. disclose a substrate containing compound semiconductor method for manufacturing the same and semiconductor device using the same where in Claim 7, the required void dimension for the amorphous silicon semiconductor layer.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required void dimension for amorphous silicon semiconductor layer in Tanaka et al. as taught by Orita et al. in order to have a semiconductor device with increased reliability.
